

## CASE STUDY: Great Wolf Water Parks – 6 locations

**Situation:** Potential slip & fall hazards on tile floors that are constantly wet caused the Great Wolf Water Park management to seek a system that improves coefficient of friction on all floor tile surfaces surrounding the water park experience, as well as the tile floors in the changing rooms, restrooms and shower areas. Plus, the slip mitigation system employed could not obscure the natural beauty of the tile and must remain easy to clean and maintain.

**Solution:** Adsil's MicroGrip™ Anti-Skid System.

**Results:** Great Wolf management began by fulfilling all such work on its parks in Texas and Wisconsin. From the proven successes of slip mitigation and ease of maintenance enjoyed at these parks, the work was extended to include parks in Pennsylvania, Virginia, North Carolina and Washington.
