

## MASONRY, CONCRETE & BRICK PAVERS EXTREME PERFORMANCE TREATMENTS

**MicroGuard AD703 Clear Masonry Surface Sealer** is a superior penetrating sealer for use on decorative brick pavers, exterior concrete surfaces, stone and most other masonry surfaces. This clear treatment penetrates masonry surfaces and reacts within the micro-porous structure filling voids and surface porosity. Once cured, these surfaces are resistant to mold and mildew growth for periods of 5 years and beyond. Dramatic deepening of existing stone colors can be expected as well as long-term repellency and easy removal of common embedded stains from chewing gum, soda, spills, etc.

**MicroGuard AD703 Clear Masonry Treatment** may also be used in conjunction with MicroGuard AD702 to create very attractive, high-gloss masonry surfaces. This is often desirable for interior concrete floors, such as factory or warehouse installations, auto repair bays, aircraft hangars or anywhere extended durability and/or resistance to abrasion, chemicals, etc., must be combined with aesthetics.

### PRIMARY BENEFITS INCLUDE:

- Outstanding Abrasion Resistance (ASTM D-4060)
- Will Not Support Mold or Mildew Growth (ASTM G-21)
- Improved Coefficient of Friction (ASTM D-2047)
- Easy to Clean, Low Maintenance Surface
- Extreme Solvent & Chemical Resistance
- Stain-proof, Nonstick, Repellent Finish
- Crystal Clear, Non-yellowing, Outstanding UV Resistance

**MicroGuard AD703** has been endorsed by NFSI (The National Floor Safety Institute) as a certified high-traction floor surface achieving nearly 2 times the minimum Coefficient of Friction as required by OSHA. MicroGuard AD703 is the protective treatment system of choice for enhancing and maintaining many outdoor surfaces found at theme parks, outdoor malls and many other public venues.
